```
public class OnOffException1 extends Exception {}  
public class OnOffException2 extends Exception {}
```

```
public class OnOffSwitch {  
    private static Switch sw = new Switch();  
    public static void f()  
        throws OnOffException1, OnOffException2 {}  
    public static void main(String[] args) {  
        try {  
            sw.on();  
            f();  
            sw.off();  
        } catch (OnOffException1 e) {  
            System.out.println("OnOffException1");  
            sw.off();  
        } catch (OnOffException2 e) {  
            System.out.println("OnOffException2");  
            sw.off();  
        }  
    }
